

Case Study - Quarterly Planning & Prioritization

Quarterly Planning & Prioritization Tool for PMs

You are the Product Manager at a small startup building a focused tool that helps **Product Managers in their quarterly planning and feature prioritization**

Planning and prioritization is a persistent challenge: PMs must intake feature requests from customers, internal stakeholders, support teams, sales, and other sources—then distill them into a clear plan using a framework that maximizes impact on the metrics that matter.

Today, this process often looks like:

- pulling data from multiple systems,
- consolidating it into spreadsheets,
- applying one or more prioritization frameworks,
- and producing a quarterly plan that then needs to be shared back with the team.

Your assignment

Design and build a lightweight product experience that streamlines this workflow:

1. Assume that feature ideas are already ingested - so you need not build the ingestion pipeline
2. Enrichment: Capture data needed to prioritize, using a prioritization framework of the user's choice
3. Enable PMs to Organize and normalize those ideas into a consistent format
4. Discuss and make changes on the fly and Generate the final quarterly plan (e.g., roadmap/board/list)
5. No Export required - we will assume that is handled

You may use any of: **Lovable, Vercel, Figma Make, Replit, Bolt, Emergent** (or a similar tool).

What we're evaluating

Most "vibe coding" tools can produce something that works with the right prompt. We will judge your submission primarily on:

- **Your product point of view** (what you chose to include / exclude and why)
- **Flow simplicity** and UX craft
- **Copy quality** (clear, minimal)
- **Adherence to the principles** described here:
<https://bhavinwiki.atlassian.net/wiki/spaces/BCR/pages/878379030/Design+for+Delight+Principles>

Submission

- Share a link to the working experience, and the project link in the vibe coding tool for us to review the process you used to build it
- Additionally answer the following
 - Define one **North Star metric** for this tool
 - List 5 events you'd instrument and why
 - Draft a detailed set of interview questions you would use to conduct interviews with PMs before building out this product
